

L'armoire

Your Wardrobe, Reimagined.

Privacy-Conscious

Trend-Aware

Body-Inclusive

THE PROBLEM

Time-Consuming

Daily outfit decisions waste significant time and mental energy.

Mismatched Outfits

Without guidance, daily combinations result in poor styling outcomes.

No Smart System

No tool evaluates outfit compatibility with your own wardrobe.

Ignores Body Type

Current tools ignore personal body type and proportions entirely.

WHAT IS L'ARMOIRE?

An AI-powered wardrobe assistant that helps users create well-matched, trendy outfits from their own closet.

— Project Vision

- Digitally catalog your wardrobe
- AI-evaluated outfit compatibility scoring
- Body proportion analysis for personalised fits
- Privacy-first architecture

ARCHITECTURE AT A GLANCE

WardrobeItem

Stores clothing data and metadata

Wardrobe

Handles grouping and cataloguing

User

Stores credentials and preferences

AuthManager

Handles login, sign-up, logout

StyleEvaluator

AI scoring: evaluates outfit combinations

L'armoireApp

Main controller; manages the full app lifecycle

OOP PRINCIPLES APPLIED

Principle	Class	Benefit
Encapsulation	WardrobeItem	Data integrity
Abstraction	AuthManager	Simpler interfaces
Composition	User & Wardrobe	Modular structure
Single Responsibility	StyleEvaluator	Easy maintenance

FUTURE IMPROVEMENTS

①

One-Piece Support

Dresses, jumpsuits & single-garment outfit categorization

②

Accessory Compatibility

Ties, scarves, bags & jewelry analysis for full outfit scoring

③

Occasion-Based Filtering

Formal, casual, sports & travel event-based suggestions

④

Gender-Specific Styling

Gender-aware fashion intelligence for tailored recommendations
